

Constipation

Is a universal and most troublesome disorder. It causes Headache, Mental Depression, impairs the Sight and Hearing, destroys the Appetite and when long continued, causes enlargement of the Liver, Induration of the Bowels, and Piles. Constipation is speedily cured by Ayer's Pills.

For a number of months I have suffered from Constipation, in consequence of which I suffered from loss of Appetite, Depression, and a disordered Liver. My eyes also became inflamed, and I was compelled to wear a shade over them, and at times was unable to bear exposure to the light. I was cured by three boxes of Ayer's Pills.

CURED BY USING
three boxes of Ayer's Pills. I have no hesitation in recommending this medicine to be used by all who are afflicted with Constipation.

I suffered from Constipation, and consequently from Headache, Indigestion, and Piles. I used Ayer's Pills, and I took at the suggestion of a friend, and I have given an effective relief. I commenced taking this remedy two months ago, and I am now free from Constipation, and I am now able to wear a shade over them, and at times was unable to bear exposure to the light. I was cured by three boxes of Ayer's Pills.

Ayer's Pills,
Prepared by Dr. J. C. Ayer & Co., Lowell, Mass., sold by all Druggists and Dealers in Medicine.

Agricultural.

Meeting of the Committee on Agriculture.

The following were the closing proceedings of the Board of Agriculture which closed Jan 20th.

Mr. Holbrook, the member from Sagadahoc read a carefully prepared and able paper on the Jurisdiction of the Board of Agriculture, suggested probably by the idea that it has some other business than the holding of farmers institutes. Mr. Holbrook, from the committee on the address of the member from York, reported in the form of a resolution to the effect that the appropriation for farmers institutes be increased to \$2,500 and that two institutes each year be held in each of the several counties of the State.

The member from Oxford Mr. Pike, amended by adding a provision that the edition of the Annual Report be increased to 20,000 copies and that all be bound in cloth. The resolution after being discussed by nearly every member present, was given a passage, and Messrs. Holbrook, Pike and Larriss were made a committee to present it to the committee on agriculture of the legislature.

Mr. Holbrook introduced a resolution asking the Maine delegation in Congress to use their efforts to have the postal laws so amended as to allow the several States to send their public documents through the mails to carriers of the States at the same rates of postage allowed publishers of newspapers a copy of the resolves to be forwarded to each member of the delegation. The resolutions were given a passage.

On motion of Mr. Barnes, member from Aroostook, it was voted that the Secretary of the Board be requested to use his efforts to see such legislation as shall better protect the stock interests of the State from the introduction of spread of contagious diseases.

President Ferris, of the College, introduced a resolution that the Board approve the main features of the Hatch bill for the establishment of a member of the delegation in connection with the State colleges, and requesting the members of Congress to favor the bill that the Secretary of the Board forward a copy of the resolutions to the Maine delegation.

The customary vote of thanks to the Maine Central Railroad and Lincoln and New Brunswick Railroads for courteous treatment was passed, and at a late hour the Board adjourned finally.

The session was characterized by a manifest desire on the part of every member to diligently search out every means by which the Board may be made instrumental in promoting the interests of agriculture and to perform its duty with the most efficient equipment for doing good work.

Much lack of progress in farming is the result of what natural philosophers would call the power of vis inertia or in other words the tendency of matter to remain in one place. Farmers deal more with this inert matter than any other class. Knowing what needs to be done is one thing, but doing it which requires hard work is quite another. In nothing is this neglect of what should be done more striking than the almost universal tendency to let poor or unproductive trees remain year after year without taking the slight trouble required to re-graft them with better sorts.

It is no good evil if a tree has been grown to bearing age with some worthless variety. Re-grafting will in three or five years make a new top often more productive than the tree would have been had the better variety been put in originally. It costs considerable to have such work done by professional grafters at from 10 to 25 cents per graft. At such rate an active man with an axe and saw or the limbs will make five or six or even more dollars per day. But the operation of grafting is so simple that any tree owner can easily learn it, and by knowing the habit of growth of the sort to be put in, he can easily make the desired result.

When he puts the graft in, the owner of an orchard will soon learn to top graft his trees more to his own satisfaction than will be done by the average grafter. He will be anxious to make a large day's work by putting in as many grafts as possible.

At the seventh annual meeting of the Vermont Dairy-men's Association at St. Johnsbury, Vt., the attendance was large and the proceedings interesting. The following are a few extracts.

L. I. Hazen, of Whitefield, N. H., who is now milking one hundred and ten cows, and who averaged seventy-eight cows last year, sold nearly 24 1/2 pounds of butter per cow. He fed ensilage and nine pounds of corn meal a day. He liked green oats for feed, corn, except during a part of June, when he thought it well to let a little on grain feeding. He sets milk in open pans. He used cod fish seed meal to some extent, and no customer complained through an expert thought he could detect the cod fish seed meal feeding in the butter. Regular hours for milking are enforced on his farm. At 4 p. m. every man who cares for the cows starts for the stable, even if in the midst of having with thunder showers in prospect.

R. C. Smith protested against haphazard milking and feeding. He believed as much improvement might be made in dairy cows by systematic feeding, and so selection has been made in trotting horses. S. P. Douglas, of Shoreham, thought heifers should be bred for special purposes, either for butter, or cheese, or for milk. He sold his cows and brought up heifers to take their places, in preference to selling heifers. Judge Gray, of Ryegate, makes 6,000 pounds of butter per year from a herd averaging eighteen mature cows.

Prof. Cook of the State Board gave some idea of the present workings of the experiment station. He thought the Vermont that bone meal is the cheapest fertilizer. He also urged the introduction of Canada corn, which contains seventy-three per cent of phosphate. Material must always be finely powdered to be most useful. Unground bone is not as available to use. Bone meal is not a perfect fertilizer, but needs the addition of some form of potash. Vermont farmers cannot afford to use commercial fertilizers without a little manure. Some thought no farmer could afford to pay over twenty-five or perhaps even twenty cents a bushel for manure.

Cloud Harvey of Barre, had fed about cotton-seed meal for ten years, and gave to each cow, while early out hay, ensilage and bran. He had samples of butter on exhibition made with and without cotton-seed meal feed. He never heard any complaint from customers on account of

cotton seed feed. He knew there was great difference in quality of the meal, much of it not fit to use. When fresh, it is used in an excellent way. It is used in limited quantities. Always fed it with a view of keeping cattle in flesh. He did not count on endulge at all objectionable. He produces at least three hundred pounds average to a mature cow. His twenty cows last year yielded 5,000 pounds of butter though six of them were two-year old heifers.
